

Geographical Extent: The epicenter of the civilization was located in present-day Pakistan and northwestern India, from which it expanded in all directions. The area formed a triangular shape and covered approximately 1.3 million square kilometers.

Administration and Political Organization

- ◆ Although much of the political and administrative structure of the Indus Valley Civilization remains **speculative due to the absence of deciphered written records**, some aspects can be inferred from archaeological evidence.
- ◆ The complexity of structures like the Great Bath, Granaries, and drainage system **suggests strong centralized governance**.
- ◆ The sophisticated economy and craftsmanship indicate leadership under a centralized authority, **likely by a class of merchants**.
- ◆ **Raised Habitations:** Centralized residential areas indicate the presence of important figures, possibly headmen and councils.
- ◆ **Absence of Temples:** Unlike Egypt and Mesopotamia, **no temples were found**, suggesting Harappan rulers focused on commerce rather than conquests.
- ◆ **Lack of Weapons:** Harappans lacked significant weapon-making, possibly reflecting a non-militaristic society.

Town Planning and Structures

- ◆ **Unified Urban Design:** Harappan cities followed a consistent grid pattern with streets oriented north-south and east-west.
- ◆ **City Division:** Cities were divided into:
 - ◇ **Citadel:** Located on higher ground, housing administrative or ritual centers.
 - ◇ **Lower Town:** Residential areas, with distinct structures and layout.

(Harappan road)

(Citadel Mohenjo-daro)

◆ Examples of Settlements:

- ◇ **Harappa, Mohenjo-Daro, and Kalibangan** had distinct citadel and lower town divisions
- ◇ **Lothal:** A rectangular settlement with no internal division.
- ◇ **Dholavira** was divided into three parts, and each part was surrounded by massive stone walls, with entrances through gateways.

◆ Building Materials:

- ◇ **Harappa and Mohenjo-Daro:** Used baked bricks with standardized sizes.
- Kalibangan:** Utilized mud bricks.

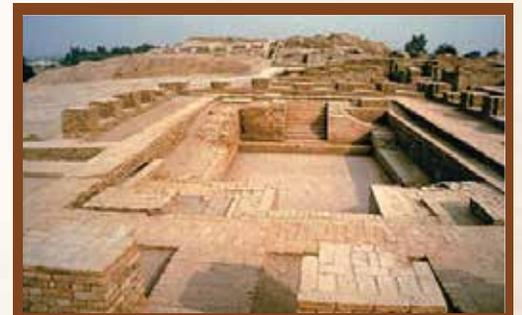

Notable Public Structures

◆ Great Bath (Mohenjo-Daro):

- ◇ A large tank surrounded by rooms for changing clothes.
- ◇ Built with burnt bricks.

◆ Granaries:

- ◇ The largest building in Mohenjo-Daro.
- ◇ Harappa had six granaries.
- ◇ Granaries were linked to grain storage and distribution.

(Great Bath Mohanjodaro)

Harappa granary

◆ Threshing Floors:

- ◆ Rows of circular brick platforms at Harappa for threshing grain (evidence of wheat and barley).

◆ Barracks (Harappa):

- ◆ Two-roomed structures, likely used to house laborers.

Drainage and Sanitation

◆ Advanced Drainage System:

- ◆ Mohenjo-Daro's drainage system was sophisticated, with street drains and manholes.

◆ Private Sanitation:

- ◆ Most houses had courtyards and bathrooms; Kalibangan homes had wells.

◆ Health and Cleanliness:

- ◆ Harappans prioritized hygiene, which was unmatched by other Bronze Age civilizations.
